Munafa

Pay your wholesaler by photographing the bill. Find out what each item in your shop really earns.

Paytm Build for India AI Hackathon, Delhi · Track 1: Merchant Growth AI

Akash Wadhwani · sheets.works

Problem: Paytm sees money coming in, not what it bought

What Paytm sees about a kirana today

₹5,400 a day

comes in by QR. That is all. The AI Soundbox can already tell the owner this total, in 11 languages.

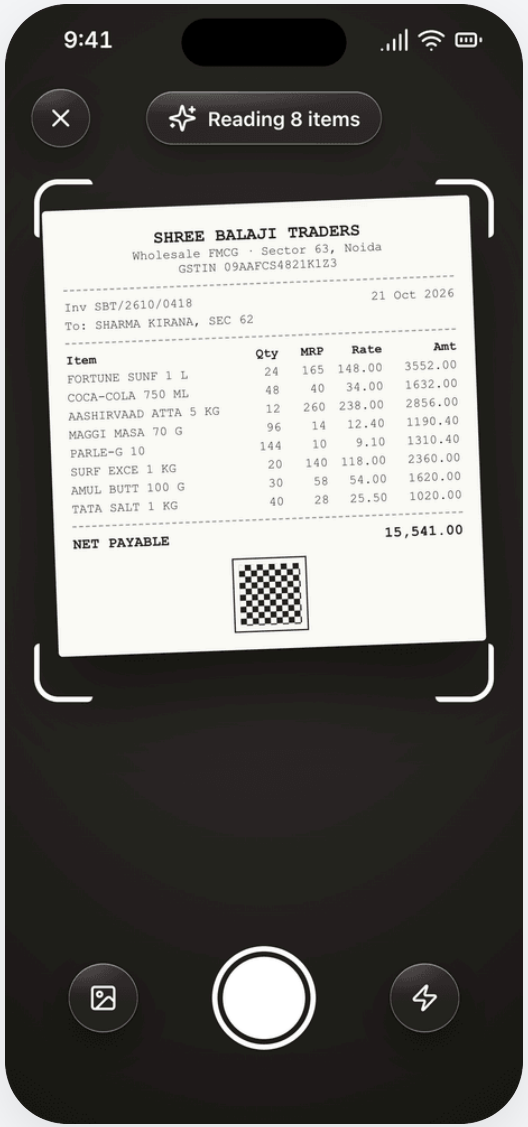

Source: Paytm AI Soundbox launch, Global Fintech Fest, Oct 2025

What nobody sees

- What the shop buys, and from which wholesaler
- What each item earns once you count how fast it sells
- How much cash is sitting on the shelves
- Wholesaler bills, mostly paid in cash or cheque, outside Paytm

The owner knows MRP minus rate on one packet. He does not know which items earn him the most each week.

The wholesaler's bill already holds the item data

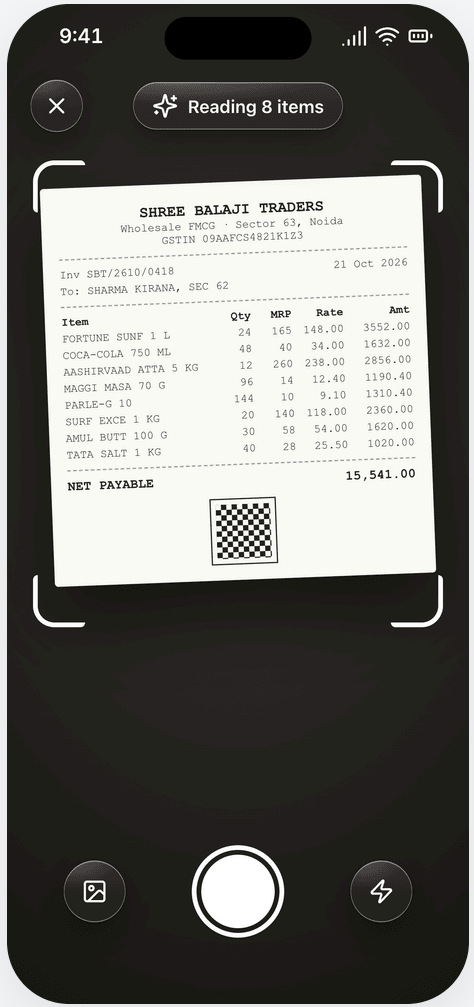

1. **Every bill lists item, quantity, the rate paid and the printed MRP.**
   That is margin per item, already written down.

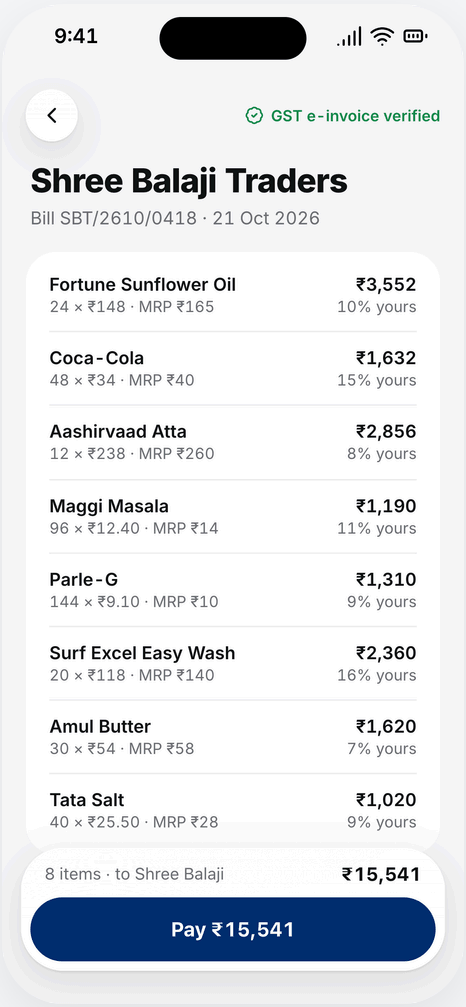

2. **A kirana sells roughly what it buys.**
   If 48 bottles of Coca-Cola come in every 4 days, about 48 go out every 4 days.

3. **Owners won't photograph bills for a report. They will to pay.**
   So the photo is the payment.

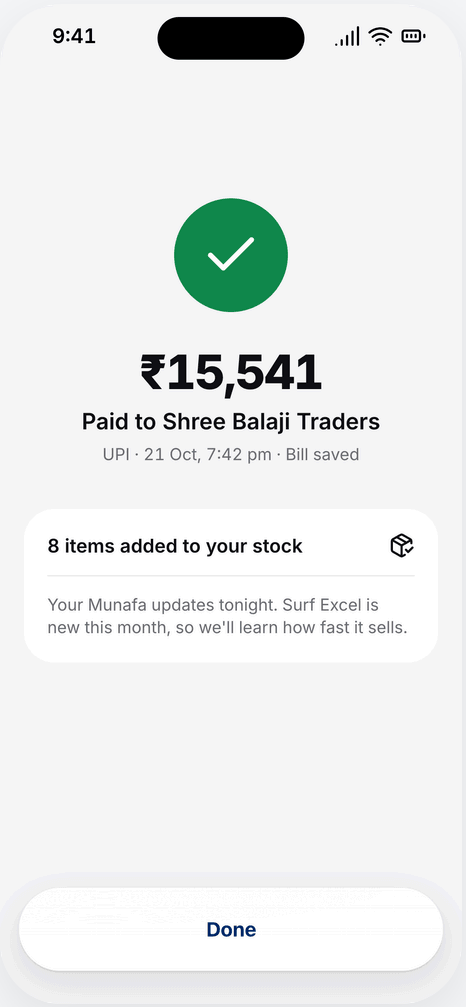

Solution: photograph the bill, pay it, see the profit

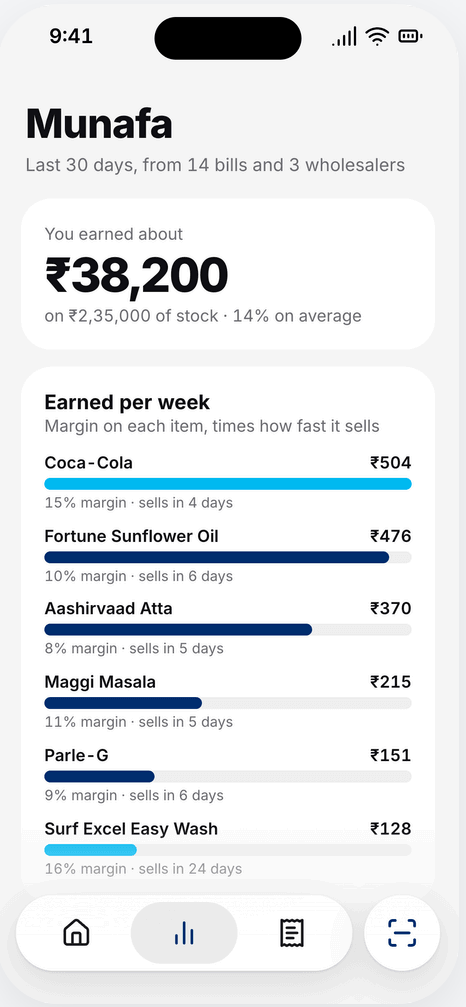

1. Photograph the bill
AI reads all 8 lines

2. Check it
Margin per item, GST QR checked

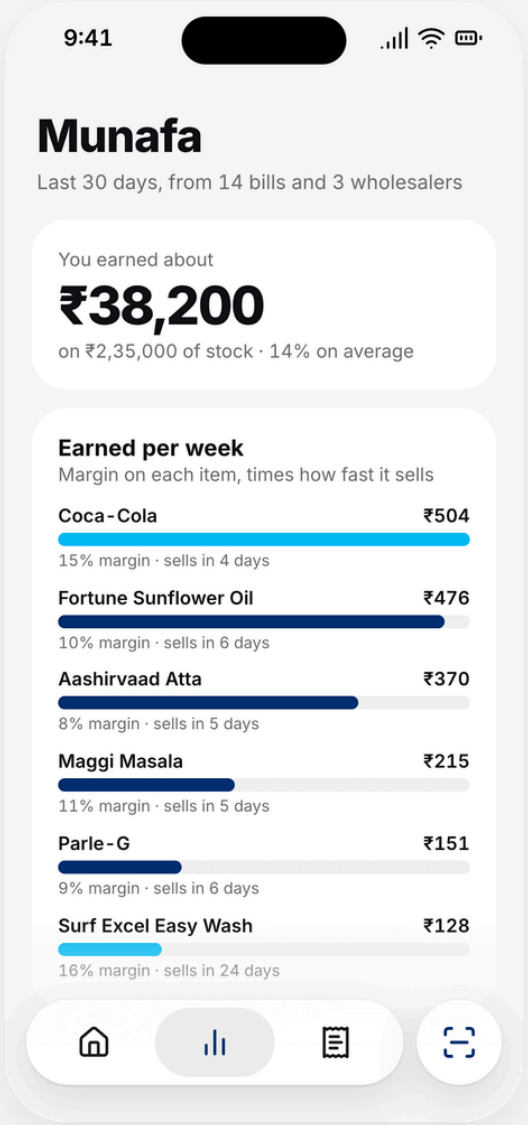

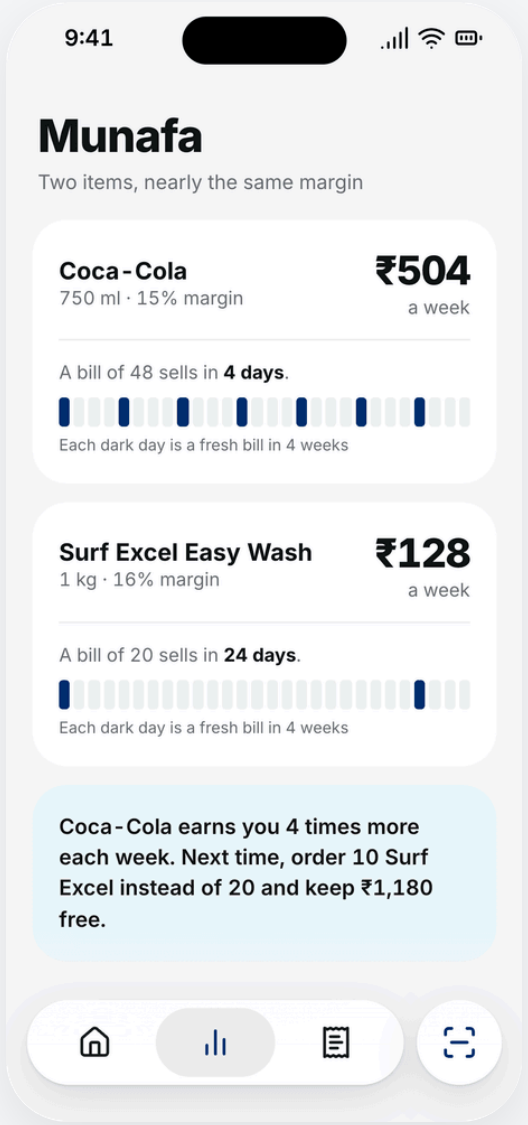

3. Pay by UPI
Stock and bill saved

4. Munafa
What each item earns a week

Profit per item is margin times speed

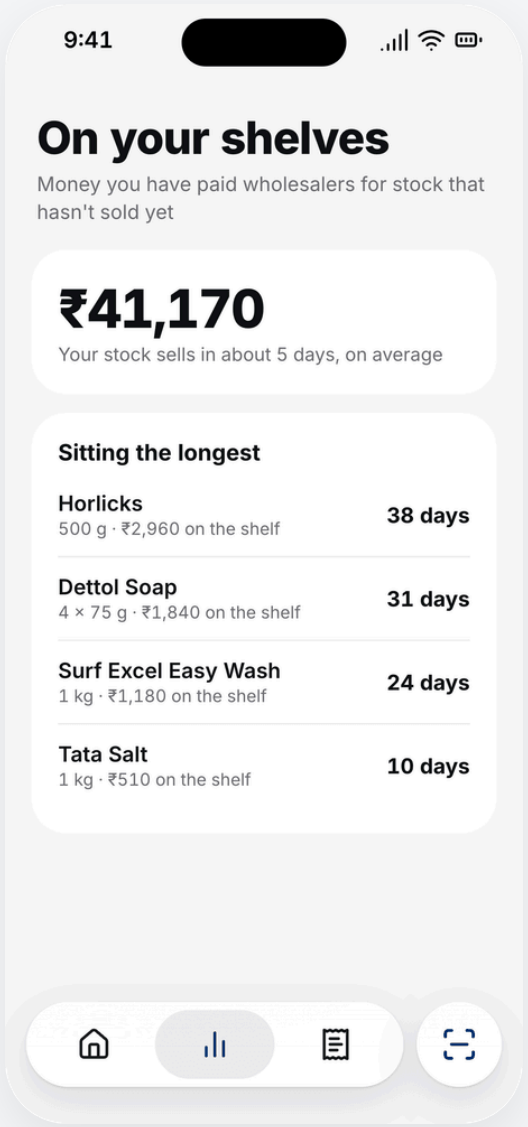

Coca-Cola and Surf Excel earn almost the same margin, 15% and 16%.

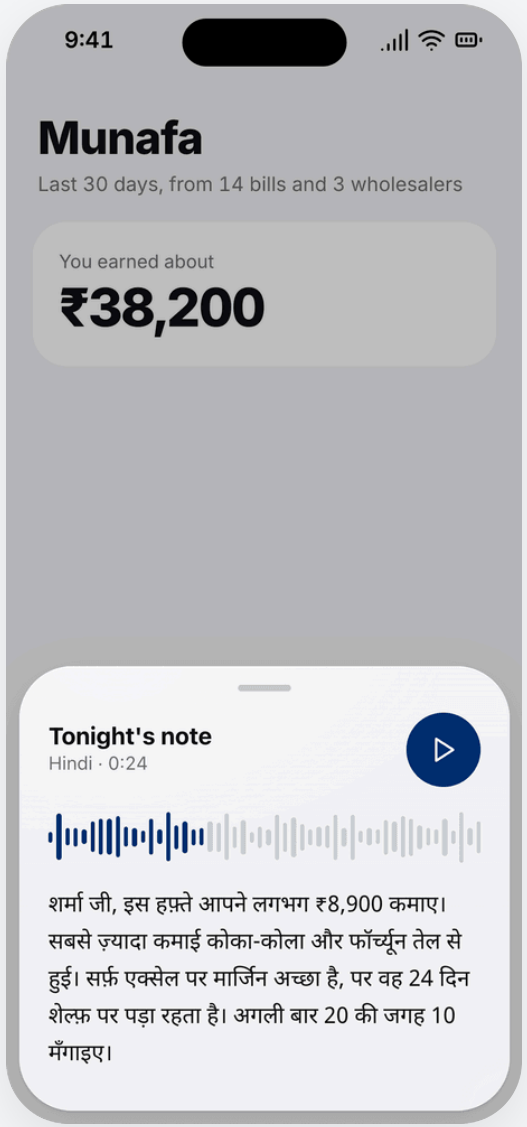

Coca-Cola sells a bill of 48 in 4 days. Surf Excel takes 24 days to sell 20. So Coca-Cola earns ₹504 a week and Surf Excel ₹128.

The app tells him: order 10 Surf Excel next time, not 20, and keep ₹1,180 in hand.

Sample shop and bill, made up for the demo.

Cash on the shelves, and a note in Hindi every night

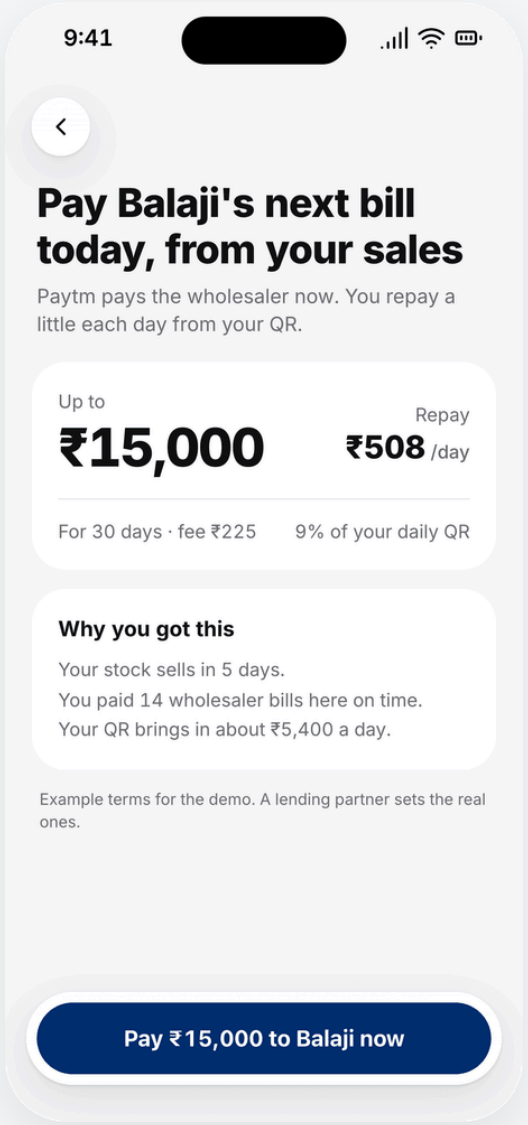

₹41,170

is paid out to wholesalers and still on Sharma ji's shelves. The Horlicks has been there 38 days. Cutting slow stock is the cheapest working capital a shop can find.

A 24-second voice note in Hindi after closing

What he earned, which item did best, and one thing to change on the next order. The same voice idea as the Soundbox, now about stock and profit.

Stock on credit, against stock Paytm can now see

Stock turnover

This shop sells its stock in about 5 days. A loan for stock is backed by stock that moves.

A payment record

Fourteen wholesaler bills paid through Paytm, on time.

Real bills

Bills from wholesalers above ₹5 crore turnover carry a GST e-invoice QR signed by the government. Paytm checks it, so a fake bill cannot raise credit.

Example: Paytm pays the wholesaler ₹15,000 today; the shop repays ₹508 a day from its QR for 30 days, 9% of its daily QR. Illustrative terms; a lending partner sets real ones. More than half of Paytm's merchant loan disbursals already go to repeat borrowers (Q4 FY26 release).

What Paytm learns about one shop

Today

Money in

₹5,400 a day by QR

After a month of Munafa

Money in

₹5,400 a day by QR

Money out

₹2,35,000 a month to 3 wholesalers

Item mix

54 items, with margin and speed for each

Profit

about ₹38,200 a month, 14% on average

Stock

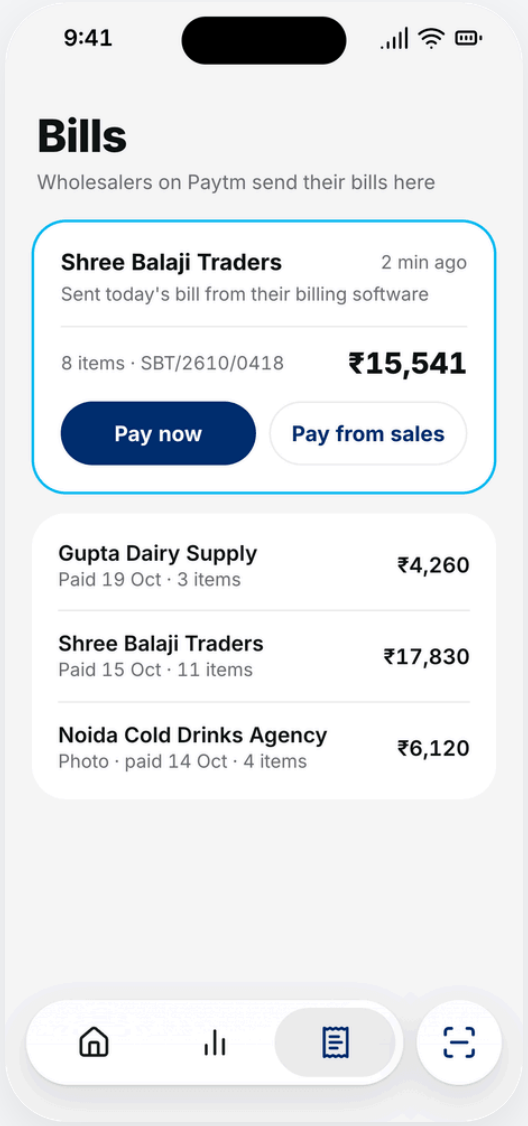

₹41,170 on shelves, sells in 5 days

Suppliers

who they are, how often, how much

The shop shares this with Paytm by consent, under the DPDP Act. Brand-level data leaves only in anonymised totals.

Next: wholesalers send the bill themselves

Most wholesalers bill from Tally, Marg or BUSY. A small connector on their side sends each bill straight to the shop's Paytm, items attached. The shop taps pay. No photo.

For the wholesaler

Paid the same day instead of chasing cash. Becomes a Paytm merchant.

For Paytm

One wholesaler brings every shop on his route. Clean item data, no reading errors.

Works today

Tally exposes its data to other software. BUSY and Marg have no public API yet, so the photo covers them.

Tech stack

Capture	Camera in the Paytm for Business app; edge detection and de-skew on the phone
Read the bill	A vision language model returns item, qty, rate, MRP and GSTIN as JSON. Claude for the demo; an open model such as Qwen2.5-VL on Paytm's own servers in production
Match items	"AMUL BUTT 100 G" mapped to one catalogue entry by brand, pack and HSN, using embeddings plus rules
Check the bill	GST e-invoice QR signature verified, totals re-added, duplicate bills caught
Munafa engine	Days between bills per item give the sales rate; margin × rate gives rupees a week; stock on hand is bought minus estimated sold
Voice	The model writes the script from the numbers; Hindi text-to-speech from an Indian voice model (Sarvam or Bhashini)
Pay and lend	UPI collect to the wholesaler; stock credit through Paytm's existing lending partners
Store	Postgres per merchant, with a consent flag on every shared field

USP: the bill and the payment are one step

	Others	Munafa
Bill-scanning apps	BUSY, myBillBook and others read bills to enter stock. That is extra work, and the data stays in the shop's app.	**Reads the bill because the owner is paying it. No extra step, and the data is tied to real money.**
Paytm AI Soundbox	Answers questions about money coming in.	**Covers money going out, item by item, so the answers are about profit, not just sales.**
Merchant loans today	Sized from QR collections.	**Stock credit sized from stock turnover and checked bills, paid straight to the wholesaler.**

Impact and benefits

The shopkeeper

- Knows which items earn and which sit
- Frees cash stuck in slow stock
- Pays wholesalers in one tap, with a record
- Gets stock on credit when he needs it

Paytm

- Supplier payments move onto Paytm
- Item-level data on every active shop
- A better signal for lending, and a new loan
- Wholesalers join as merchants

The wholesaler

- Paid the same day, not in cash weeks later
- Fewer bills chased by hand
- Sees which shops reorder

Business model: free for the shop

Munafa costs the shopkeeper nothing. Paytm earns on what it unlocks:

Stock credit

Distribution income from lending partners, the way Paytm earns on merchant loans today, on a smaller and more frequent loan.

Payments

Wholesaler payments move onto Paytm, and wholesalers sign up for the gateway and devices.

AI Soundbox

Munafa answers become part of the Soundbox AI plan merchants already pay for.

Brand insight

With consent, anonymised sell-through by area, sold to FMCG brands who pay for this kind of data today.

What we will build on 31 October

1. Photograph a real wholesaler bill from a Noida kirana, live
2. Read every line, check the totals, show margin per item
3. Pay it by UPI in test mode
4. Munafa after a month of bills, with the Hindi voice note
5. The stock-credit offer, and Paytm's view of the shop
